

B-TYRATE DUO feed additive

B-TYRATE DUO is a high concentration matrix coated calcium- and sodium butyrate combination to ensure a gradual release of butyrate over the whole GIT and optimum stability. The special matrix coating creates a product with hardly any smell and stable under all circumstances.

- High concentration**
- Calcium and sodium butyrates**
- Improves the Intestinal integrity**
- Strengthens the microbiome balance**
- Modulates fat metabolism**
- Controls Gram- bacteria**
- Free flowing micro-pellets**

...because healthy animals generate healthy profits

B-TYRATE DUO

feed additive

Composition:

B-TYRATE DUO contains minimum 67% of Calcium butyrate and 13% sodium butyrate in a micro-pelleted coating.

Action:

B-TYRATE DUO is a feed ingredient specially designed to stimulate the intestinal health. Butyrates, the salts of butyric acid are well documented energy sources for the intestinal villi, increasing their length and crypt depth. This results in an increase of the intestinal surface. Butyrates also enhance enzyme production improving the digestibility of the feed. As a result more nutrients absorbed resulting in an improved growth and FCR.

B-TYRATE DUO is a matrix coated micro-pelleted and virtually smell-neutral product. The matrix-coated product shows optimal stability, enhanced stomach stability ensuring a gradual release throughout the whole GIT tract.

B-TYRATE DUO combines the advantages of Ca- and Na-butyrates in one product. The faster release of Na-butyrates combined with the stability and gradual release of the Ca-butyrates. This allows a broader coverage of butyrate throughout the GIT tract.

Administration:

Broilers	1,5 kg/T from 0-10 days 1,0 kg/T from 10-28 days 0,5 kg/T from 28-42 days
Pullets:	1,5 kg/T 0-21 days, then 1,0 kg/T Layers: 1,0 kg/T from wk 18-55 1,5 kg/T from wk 55-90
Ruminants:	30 – 50 g/head/day
Aquaculture:	0,5 – 3,0 kg/T
Piglets/pigs:	0,5 – 3,0 kg/T

Use:

For use in feedstuffs only.

General notes:

Close packaging firmly after use. For optimal storage, it is advised to keep the product in a cool and dry place, protected from direct sunlight.

Presentation:

20 kg paper bag with plastic inner liner.
